

Your specialist for injection moulding
and assembly technology for vehicle interiors

High quality injection-moulded parts for the automotive industry

Utescheny has been producing innovative, high quality injection-moulded parts for the automotive industry since 1976. Central to what we do is a commitment to always developing unique solutions for every vehicle, perfectly reflecting the special nature of the model and its brand – a commitment that numerous well-known vehicle manufacturers from across Europe have now come to appreciate.

Using our extensive expertise in materials and manufacturing technology and the most up-to-date technical equipment, we develop and manufacture plastic components of the highest design and functional standards for our clients, for a vast range of applications in vehicle interiors. Integrated project management at every stage of the process ensures timely completion in accordance with clients' specifications. The measure of success for what we do is always the same – complete customer satisfaction.

Peguform

Polytec

Porsche

Röchling

Seat

Skoda

VW

Whether for roof handles, storage pockets, seatbelt feeders or covers, or for central consoles, coat hooks, decorative trims or cup holders – there is hardly a single plastic injection moulded product for vehicle interiors that we could not manufacture.

Furthermore we can offer new, highly durable plastic products as substitutes for metal products: e.g. clutch and accelerator pedals or convertible frames. Our client list includes numerous well-known vehicle brands, from A for Audi to V for Volkswagen.

Plastic injection moulding & assembly

The right procedure for every requirement

Whether for single or dual component injection moulding, gas pressure method (GPM) or our unique, patented GPM+2C combined process – we can offer you the perfect solution for any requirement. With over 60 production machines and clamping forces of 50 to 500 tonnes we can produce high quality, cost-effective injection moulded products for every type of requirement.

Fully automated production, on our in-house-developed automated assembly machines, enables fast and efficient component assembly – from single units to mass production. All component parts are assembled ready-for-use and prepared for fast and easy fitting in the vehicle.

Packing into selected cargo carriers ready for shipment is also integrated into our automated assembly machines – saving our clients time and money.

UTESCHENY

Quality philosophy

Our goal: complete customer satisfaction

For us, quality is not a promise but a fact. Strict control of incoming goods, automated production monitoring and comprehensive supplier management enables us to establish a complete value chain, from raw materials to finished product.

As a long-established company of over 30 years' standing, quality and reliability are our utmost priorities. Complete customer satisfaction coupled with our own commitment to always delivering the best of all possible solutions are the driving forces behind what we do on a day-to-day basis, together with ongoing development of new innovations in the field of injection moulding technology.
